

Every solution carries
the seed of the next crisis.

This is not bad luck. It is mathematics.

AHMED HAFDI proves that solutions breed new problems *exponentially* — and constructs **Cascade Theory**: the framework explaining why celebrated innovations generate the defining crises of the next era.

Essential reading for anyone who leads, governs, builds, or decides.

‘Every solution, once released into a connected system, creates problems faster than the system can absorb them — and the more connected the system, the wider the gap.’

— from the Introduction

AHMED HAFDI is a software engineer and researcher based in Kenitra, Morocco. *More Solutions = More Problems* is the trade edition of his Cascade Innovation framework. The full mathematical treatment appears in the underlying research paper at researchgate.net/publication/395720779.

‘For every complex problem there is an answer that is clear, simple, and wrong.’

— H. L. Mencken

‘Those who cannot remember the past are condemned to repeat it.’

— George Santayana

MORE SOLUTIONS = MORE PROBLEMS

AHMED HAFDI

MORE SOLUTIONS = MORE PROBLEMS

Why Every Solution
Creates the Next Problem
